Mod Virtuemart Featured Product Grid

£10.00

This module extension for Joomla 1.5 and Virtuemart can be used to show featured products, top ten products, recent products, and random products from some or all categories.

It has two views, a grid view and a list view: the list view can be used to show product information.

The module is particularly useful when you want to display additional images for your products, as these are shown in a scroller.

The module is versatile. The size of the images are adjustable, as is the height and width of each cell (and so the numbers displayed per row can be adjusted). You can choose whether or not to show the price and add to cart button. There is a choice of transition effects for the images.

The products can be filtered by selected categories, and our new feature is that it can now filter products according to the current category when a category browse page or a product flypage is being viewed.

You can find further information about this in the [documentation](#).
