

{product\_snapshot:id=25}

This month's featured extension is the module for Joomla! 1.5, 1.6 and 1.7, mod NewsTab.

This module allows you to display links to your Joomla news articles in a series of tabs, a format popular with many news websites. A simple application module would be to display 'latest', 'popular' and 'featured' articles using three tabs. However this module is extremely flexible, and is capable of far more than that. You can display up to 8 tabs

The module supports articles both from the Joomla core content component and from [Mighty Extensions Resources](#), also the K2 content component.
