

We have a new module, mod random flv.

This is a module for the Joomla! 1.5 CMS. It plays a random selection of FLV (Flash video) files from a selected folder. This module can also function as a content plugin, allowing you to embed the player directly into an article. The plugin can play either a random selection of video files, or a specified file list - great for video podcasting.

[You can buy the random FLV player here.](#)
