Swiftgallery Now Supports Joomla 1.6

Sunday, 22 August 2010 16:51 -

[Swiftgallery](#) , our image gallery component extension for Joomla now supports both Joomla 1.5 and Jommla 1.6.

It is called 'Swift Gallery' for a reason - it is an ultra-fast way to create a really stylish looking Flash image gallery from any folder containing images.

You just upload your images to a folder of your choice. Then create a new menu item, and set the folder path as a parameter. The component can create captions automatically, using either Exif metadata, or the image filename.

The component also includes a content plugin, allowing you to embed galleries directly into your article content.
