

We have a new update for our puzzle game component for Joomla, [Com Jigsaw](#) .

This extension for the Joomla 1.5 CMS displays the images in a selected folder as a jigsaw puzzle. The number of rows and columns can be set through the menu system, allowing the difficulty level to be altered. You can have multiple versions of the component with varying difficulty levels.

The latest version includes an extra layout, which displays the puzzle board and pieces in a horizontal layout, plus a fix that increases the randomness of the image selection.
