Version 2 of GooglebaseXML Released

Version 2 of Com GooglebaseXML , our component for Joomla 1.5 and Virtuemart 1.1x is now released.

This component allows you to create an XML product feed for your Virtuemart store for upload to Google Merchant Centre . The latest release includes several new features designed to give you a more accurate and informative product feed. These include:-

- Product variant display
- Support for additional product attributes such as size, color etc
- Support for the Google Category attribute
- Additional countries, those supported are now: United States, United Kingdom, Germany, France, Japan, the Netherlands, Spain, Italy, China, Australia, Brazil and Switzerland
- Support for sale_price, and sale price effective date attributes
- Additional product images
- Feed can use Virtuemart product type data fields

Version 2 is designed to be much more flexible about the product information that can be displayed. An entirely new feature is the use of Virtuemart product type information, which can be incorporated into the data feed to allow you to customize the data sent to Google for each product.

Version 1 of Com GooglebaseXML was one of our most popular products, we hope this new version will be even more popular with customers, as our aim is to make it a highly effective tool for submitting your products to Google product data search.

Buy Now

 Existing customers who have bought the extension in the last year can download the new version using their existing download id.
