

******* Now compatible with Joomla 1.5 and 1.6*******

As well as functioning as a separate module, the flv player can be used as a content plugin, allowing the player to be directly embedded into Joomla! content articles. This is great for video podcasting and similar uses.

```
{random_flv:autoStart=no}
```

The player can be used to play either a specific flv, or a list of flvs, or can play a random selection from a folder.

The plugin requires the random flv pro module to be installed in order to work, and is sold bundled with that module.
